

Date: 21 March 2020
Ref.: Proc./663/0320
Bid no.: **BID-536-GOO-ICB/20**
Bid Name: Procurement of Feed Supplementation
Subject: **Tender Clarification Letter #1**

To whom it may concern

Please find below question received from one of the invited bidders and our reply in **RED**:

1. On page 25, it reads" The bid validity period shall be one hundred and twenty 120 days. "Later on, it reads the quantity has been split as 3,600 mt in July, 3,600 mt in November. Could you confirm that each of 3,600 mt needs to be delivered in 60 days? **Yes, each 3,600 ton needs to be delivered in 60 days**
2. Technical Specifications table requires the bidder to provide documents for part E. Documentation, however for us, it would be fresh production specifically prepared for this tender. Thus, we do not have those documents available. Please, advise how to proceed.

E	DOCUMENTATION
1.1	Product technical data sheet specifying Composition. Based on the Specifications requested by the Purchaser, the Supplier should provide production specifications compliant equal or better to the ones provided by the Purchaser.
1.2	Certificate of compliance to health and safety standard issued from designated authority. The supplier should have this document from the National Authority regulating "Standards and Measures" or the Chamber of Industry.
1.3	Test analysis proving that product complies with the technical specifications and composition mentioned above. A third-party Inspection Company (paid by the supplier) must carry inspection and analysis and provide the Certificate of compliance of the product to the one supplied by the Bidder. Samples for the test must be carried out in the presence of the Implementing Entity and / or an SRTF representative.

3. On page 44, 46 and 48, Item 7 for Calves, Sheep and Goat conveys "Components must be produced in 2019" while the same clause has 2020 as a production time for Cattle. Please, confirm if it typo and all meant to be 2020 components. **It is typo mistake, meant to be 2020 Production.**
4. In the given standard requirements and instructions, the parameters are given without min or max references. We must especially know of Crude Fibre's min or max parameters for Calves. Since this value has a great impact in the cost of feed. For instance, if 2.80 value is max, it would sharply increase the cost of feed. If it is min, it would not. Hence, kindly, advise.

Bidder can fill in the note D if they have equivalents.

D	NOTE		
1	Bidders may propose any product/system, which is equivalent or better than the requirements specified above.		

We are looking forward to receiving your offers before the deadline of submission.

Best Regards,

Lakis Papastavrou
